

GANGAPUJARI JANAKI VENKATA PAVAN SAI

Full Stack, DevOps and AI Systems Engineer | MERN Stack | FastAPI | Cloud | Cybersecurity

Hyderabad, India | +91 9502589529 | Email: pavansai20052004@gmail.com

LinkedIn: <https://www.linkedin.com/in/g-janaki-venkata-pavan-sai-923b91408> | GitHub: <https://github.com/pavansai20052004-hue>

Portfolio: <https://pavan-sai-portfolio-xi.vercel.app> | DevPilot AI Live: <https://devpilot-ai-two.vercel.app>

PROFESSIONAL SUMMARY

Full Stack, DevOps and AI Systems Engineer with a Data Science background and hands-on experience building secure MERN applications, REST APIs, AI/ML workflows, DevOps automation and cybersecurity simulation systems. Creator of DevPilot AI, an autonomous DevOps incident recovery platform deployed on Vercel and shortlisted Top 1000 worldwide in the OpenAI x Outskill Hackathon. Strong foundation in API validation, JWT/RBAC, MVC architecture, cloud-ready deployment, CI/CD fundamentals, Docker, Kubernetes workflows and production troubleshooting.

TECHNICAL SKILLS

Programming: JavaScript ES6+, TypeScript, Java 17/21, Python, SQL, Bash

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, responsive UI development

Backend and APIs: Node.js, Express.js, FastAPI, Flask, Spring Boot, REST API design, MVC architecture, middleware, input validation

Databases: MongoDB, PostgreSQL, MySQL, SQLite, Neo4j graph modeling, JSON data stores

DevOps and Cloud: Linux, Git, Docker, Docker Compose, Kubernetes, Vercel, Render, Netlify, Apache Maven, Ansible, Nginx, YAML, CI/CD

Cybersecurity: JWT, RBAC, attack path simulation, risk scoring, threat modeling, audit logging, security headers, API key mode

AI/ML and Data: OpenAI API, Gemini API, Scikit-learn, Pandas, NumPy, feature engineering, ROC-AUC, cross-validation, predictive modeling

Blockchain: Solidity, Ethereum, Web3.js, IPFS, smart contracts

INTERNSHIP EXPERIENCE

Data Science and Analytics Intern | Zidio Development | Hyderabad, India | May 25, 2026 - Present

- Started internship focused on Python, data cleaning, exploratory data analysis, dashboards and analytics reporting workflows.
- Apply Pandas, NumPy, SQL-style analysis, visualization and model-evaluation concepts to convert structured data into actionable insights.

Full Stack Web Development Intern | Unified Mentor | Hyderabad, India | Jan 2026 - Apr 2026

- Developed secure MERN applications with 15+ REST APIs using Node.js, Express.js and MongoDB.
- Implemented JWT authentication, RBAC authorization, input validation and middleware-based error handling.
- Structured MVC backend modules and Agile-style delivery practices for maintainable feature development.

DevOps Intern | Skilified Mentor | Hyderabad, India | Mar 2026 - Apr 2026

- Automated Java compile-test-package lifecycle using Apache Maven to reduce manual build and packaging steps.
- Configured Java 17 build environments, resolved Maven dependency conflicts and standardized repeatable build workflows.
- Practiced CI/CD fundamentals, Git workflows, SDLC practices, Linux troubleshooting and deployment-ready execution.

PROJECTS

DevPilot AI - Autonomous DevOps Incident Recovery Platform | Next.js, React, TypeScript, FastAPI, Python, OpenAI API, Vercel, Render, Docker

Live Project: <https://devpilot-ai-two.vercel.app>

- Built a deployed AI DevOps engineer that converts logs, CI/CD failures, Kubernetes signals, Terraform drift, security risks and cloud cost findings into reviewed recovery actions.
- Implemented incident dashboard, log intake, predictive failure analysis, Kubernetes restart/rollback, Terraform remediation, security analysis, cost optimization and voice assistant workflows.
- Designed role-aware team context, demo mode, API validation, safe action approvals, SaaS usage metering, audit-friendly screens and Vercel/Render deployment paths.
- Shortlisted Top 1000 worldwide in the OpenAI x Outskill Hackathon.

Cyber Digital Twin - Attack Path Simulation Platform | Python, Neo4j-ready Graphs, Docker, Cybersecurity Analytics

Project Link: <https://github.com/pavansai20052004-hue/cyber-digital-twin>

- Modeled assets, identities, trust links, vulnerabilities and controls to simulate attack paths, blast radius and defense ROI.
- Added adversary profiles, what-if scenarios, audit logs, rollback snapshots and Docker-ready local execution.

PROJECTS CONTINUED

AegisCloud - Self-Healing AI Cloud Infrastructure Platform | Java 21, Spring Boot, FastAPI, Kubernetes, Prometheus

Project Link: <https://github.com/pavansai20052004-hue/Self-Healing-AI-Cloud-Infrastructure-Platform>

- Built self-healing infrastructure workflows with Spring Boot/FastAPI services, Kubernetes manifests, Prometheus alert logic and AI-based remediation ranking.
- Added approval gates, rollback triggers, incident intelligence and audit ledger patterns to keep automation controlled.

RentEase - Rental Management Platform | React, Node.js, Express.js, MongoDB, JWT, RBAC

Project Link: <https://github.com/pavansai20052004-hue/rentease-project>

- Built role-based rental dashboards, JWT authentication, RBAC, MVC backend modules, reusable middleware, CRUD operations and validation-focused API flows.
- Delivered 12+ workflow APIs with clean frontend-backend separation.

HunarHub - Skill Marketplace and Talent Connect Platform | React, Node.js, Express.js, MongoDB, CORS

Project Link: <https://github.com/pavansai20052004-hue/HunarHub>

- Developed a full-stack marketplace with 10+ REST APIs, RBAC logic, MongoDB CRUD, CORS-ready configuration and centralized error handling.

CrediSense AI - Credit Risk Decision Platform | Python, Flask, Scikit-learn, Pandas, NumPy, SQLite

Project Link: <https://github.com/pavansai20052004-hue/credit-risk-ensemble-ml>

- Built an ML-backed credit-risk platform with role-based dashboards, loan screening, approval/default risk scoring, preprocessing, feature engineering, ROC-AUC evaluation, cross-validation and tuning.

DevOps Automation - Maven Build and Ansible Configuration | Java 17, Apache Maven, Ansible, Linux, Nginx, YAML

Project Link: <https://github.com/pavansai20052004-hue/devops-ansible-config-management>

- Automated Maven compile-test-package lifecycle and Linux server provisioning with idempotent Ansible playbooks, Nginx service setup and repeatable changed=0 reruns.

GenAI-Test - Gemini AI Chatbot Web Application | Node.js, Express.js, JavaScript, Gemini API

Project Link: <https://github.com/pavansai20052004-hue/genai-test>

- Built a full-stack AI chatbot with backend REST endpoints, secure proxy behavior, async API handling and real-time frontend communication.

EDUCATION

B.Tech in Data Science - Holy Mary Institute of Technology & Science | 2022 - 2026 | CGPA: 8.0/10

Intermediate (MPC) - Glimpses College | 75%

Secondary School Certificate (CBSE) - DAV Public School | 75%

CERTIFICATIONS

Full Stack Web Development - Unified Mentor | Generative AI - Infosys Springboard | Artificial Intelligence - Infosys Springboard | DevOps - Skilified Mentor | IBM SkillsBuild

ACHIEVEMENTS AND ADDITIONAL INFORMATION

- OpenAI x Outskill Hackathon participant; DevPilot AI shortlisted Top 1000 worldwide.
- Research publication: Ayurvedic herb traceability using blockchain technology, January 2026.
- State-level 1st place in 100m athletics; national-level cricket player.
- Languages: English, Hindi, Telugu.
